Final project

Scoring

- 3: 3 pts;
- 4: 5 pts;
- 5: 7+ pkt.

Tasks

1. Design a layout for the main page of the webapp - it should contain a header, a textbox with a placeholder (e.g. "enter phrase here"), a select box with four element options (could be emoji or a regular text) and a button, all with at least a 32px Helvetica font (other ornaments as you wish).
2. Pressing the button should send both the phrase and chosen element to another page, which would display them, one under another.
3. Set the background color in association with the element chosen on the previous webpage (e.g. red for fire, etc.).
4. Similarly, depending on the element, display a proper picture of it, anywhere on the page - it's size should be set to 50% of window's width (independently from window's resizing).
5. The picture mentioned above should be picked at random from a set of a given category (e.g. for 🧯 there should be few images depicting fire available, and only one of them should be picked and displayed, randomly).
6. Set any picture in the upper right corner (where it should stay independently from page scrolling or window moving/resizing).
7. Put a hyperlink anywhere on the second page that will lead back to the main one.

BONUS: the picture in the corner should be rotated by X degrees, where X equals to number of characters in the sent text times 10 (e.g. when the phrase reads "RANDOM", the pic should be rotated 60 degrees). *(point available only during the first credit date)*

Any additional settings above these specified here are up to you; also, no need to use the exact same graphics, colors nor elements as I did (but you can). Colors and emojis I used in my elements:

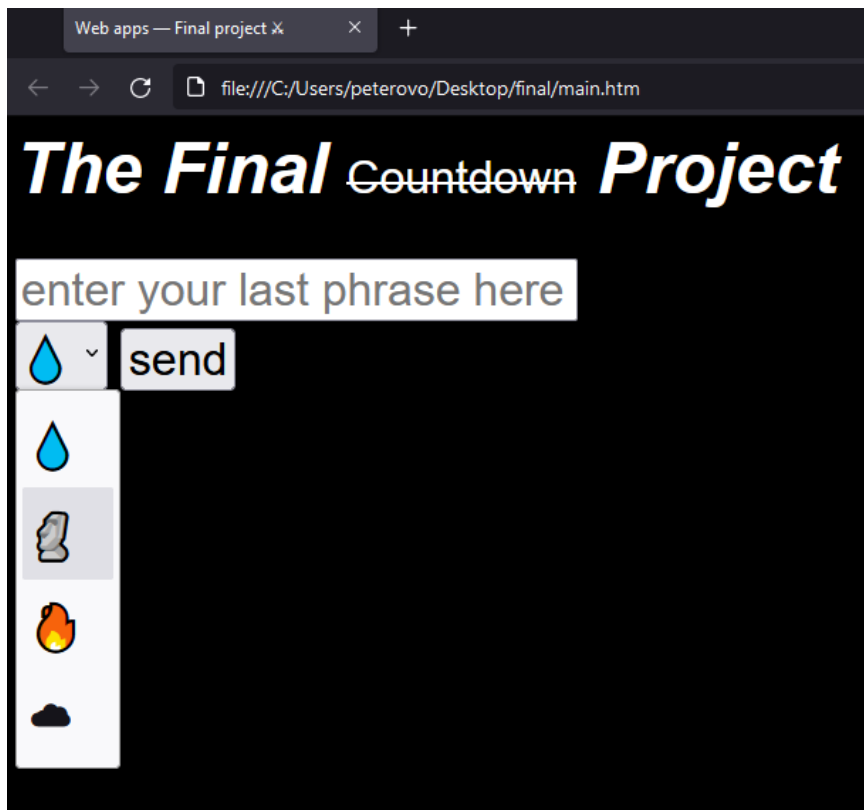

- 💧: lightblue;
- 🧯: firebrick;
- 🌿: darkolivegreen;
- ☀️: lightyellow.

Pictures made with Fooocus AI.

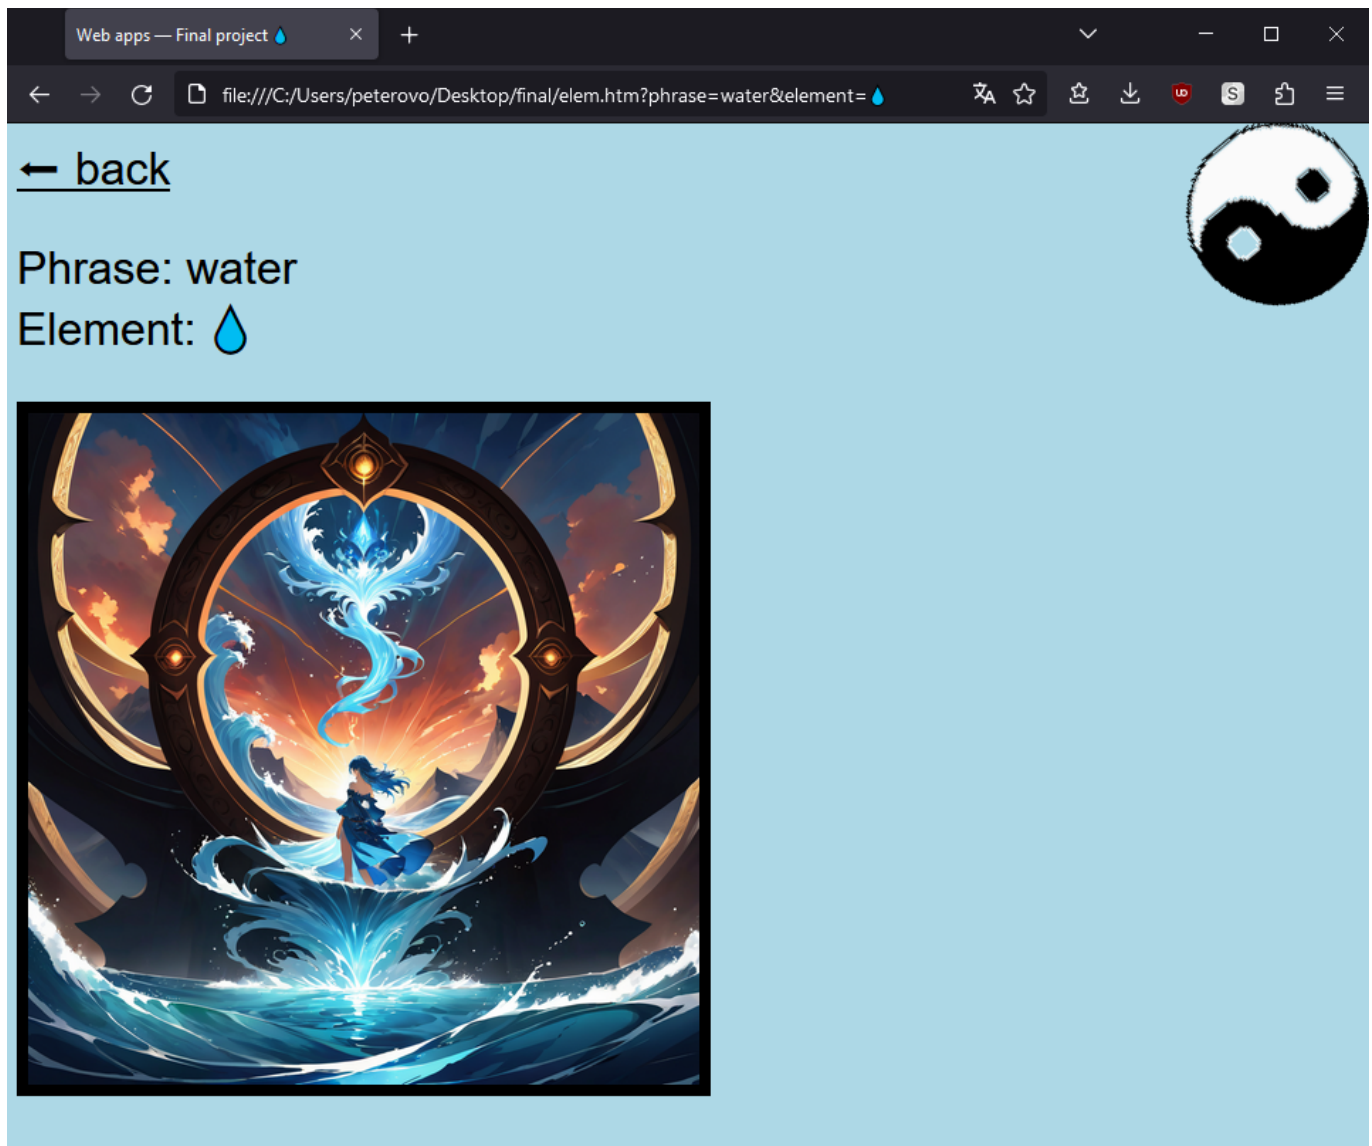

(for some reason I couldn't create them without anime ladies, even though I tried; ai was probably too inspired by Lyra's invention)

Example

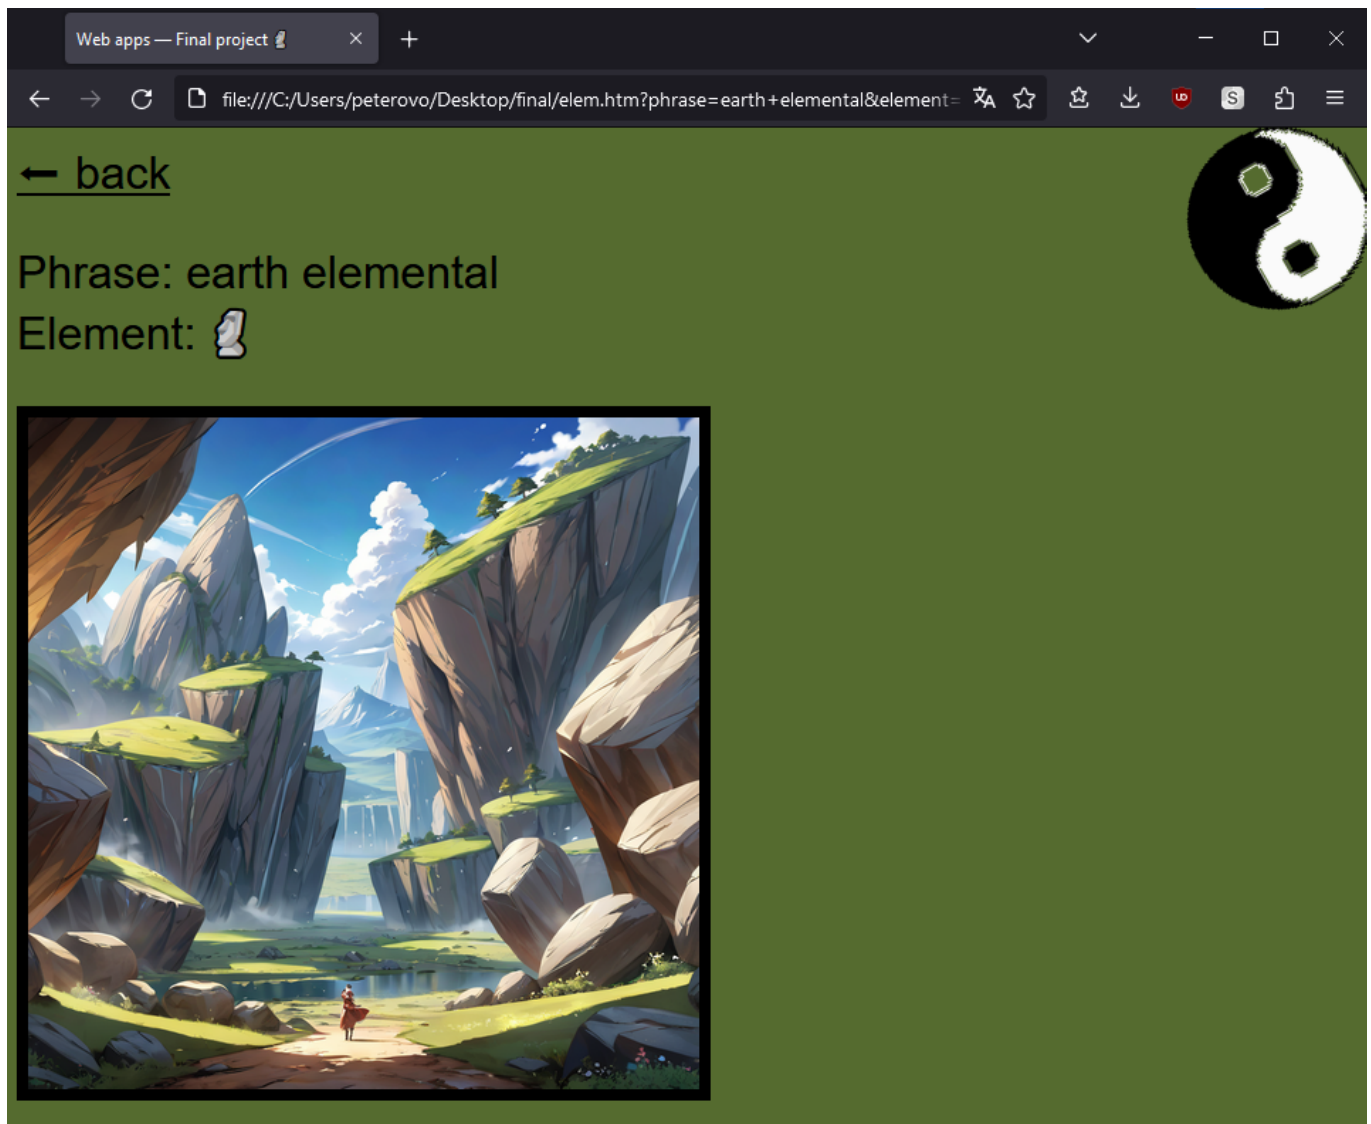

1. Main page

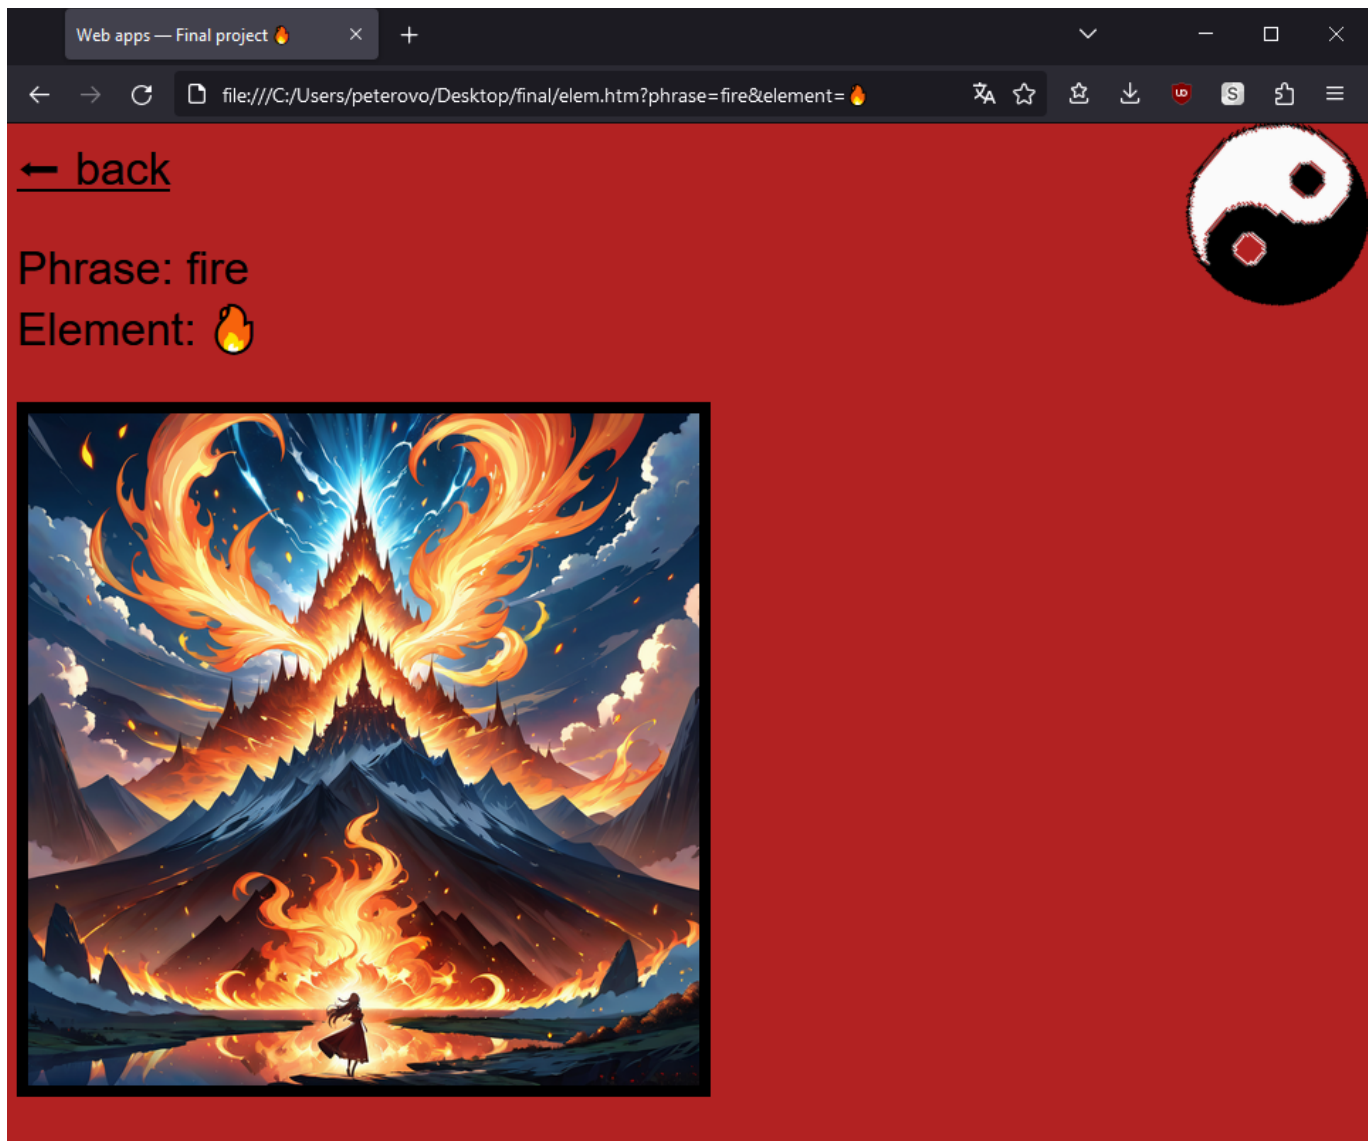

2. Second page - water

3. Second page - earth

4. Second page - fire

5. Second page - air
